

RINGBUSTER

PEX Ring De-Crimping Tool

MASTERS® RINGBUSTER cuts crimped rings off fittings, expanding crimped tubing for easy removal in seconds. This heavy-duty tool with a rounded anvil head allows for fast cutting without damaging the outside of the fittings, making them reusable.

MASTERS® RINGBUSTER will cut 1/2", 3/4" and 1" copper, brass and poly alloy/plastic fittings and tube.

NOT for use with stainless steel rings or ProPEX fittings.

Directions:

- Cut off PEX tube close to the fitting.
- Insert small jaw of **MASTERS® RINGBUSTER** inside fitting and fully close handles, forcing cutter through crimp ring.
- Reposition cutter to uncut side of ring and partially close handles, forcing crimp ring open.
- Repeat in another position to free ring for removal.
- Reinsert **MASTERS® RINGBUSTER** into fitting; fully close handles, forcing the cutting jaw into PEX pipe.
- Repeat in several positions to free PEX pipe for removal.

To keep tool in good condition periodically adjust screws. A properly adjusted tool will allow the edge of a 3/4" fitting to closely pass between the jaws of the tool when handles are fully closed. To adjust, loosen nut, turn stop screw and retighten lock nut.
